MIXEL USA LLC ANNOUNCES MASTER DISTRIBUTORSHIP FOR COOLING WATER PRODUCTS

Washington, DC. – January 6, 2014 – Arlington-based Mixel USA LLC, leading supplier of filming amine emulsions for cooling water treatment in power plants and exclusive U.S. importer of Mixel® anti-fouling products, announced today that it has signed a strategic agreement with Baltimore’s American Chemstar, Inc., trading as Amchem Solutions, to become its master distributor to all members of the Association of Water Technology. With proven success in power plants and large industrials, Mixel USA is pleased to partner with Amchem Solutions to implement this innovative technology to the benefit of a wider range of small to mid-sized water treatment applications.

Mixel USA, LLC, offers design, installation, and/or operation of all Mixel water-treatment products and systems. Mixel USA’s core products, Mixel 432, MexClear and MexSteam, are considered superior environmentally, technically and financially to traditional water treatment programs. These “green” solutions work equally well in large water-cooling systems such as power and industrial plants, as well as smaller commercial, institutional, government, school, and office facilities. The environmental performance, compact size, simplicity, and safety for workers and the public make it an especially valuable innovation for water treatment.

The far-reaching agreement significantly expands Mixel USA’s capabilities to supply utility, industrial and institutional plants with Mixel’s innovative products. Manufactured by Mixel Industries SAS, France, these emulsions are based on extensive research and development and produced from organic substances to be safe for the environment. These products reduce fouling from biological and chemical sources, optimize cooling efficiency, and lower operating costs. Amchem Solutions will provide Mixel products along with technical support to water treatment companies across the US based on their own operating experience in more than 50 facilities and Mixel USA’s technical expertise in industrial applications.
